(54) Title: NEW EXPRESSION SYSTEM FROM RHODOCOCCUS

(57) Abstract: Title: The present invention provides an isolated polynucleotide comprising the kstD promoter from Rhodococcus erythropolis. The polynucleotide can very advantageously be used as a controllable transcription activator. Said controlling function can be provided by providing said isolated polynucleotide with a nucleotide sequence encoding a transcription regulator of said promoter. In the present invention, such a transcription regulator may be externally induced, such as by introduction of steroidal compounds. In an alternative embodiment of the present invention the isolated polynucleotide may comprise the kstR gene or a homologue or a functional part thereof as the transcription regulator of the kstD promoter.
